Executive Summary

This report analyses 18 family-focused sport initiatives retained from an initial dataset of 247 records. The final sample covers nine European countries and includes municipal programmes, club-based activities, family camps, Special Olympics family support, project-based initiatives and recurring community sport offers.

- **The strongest recurring features are affordability, active participation of family members, regular or recurring opportunities, welcoming and adaptable delivery, and partnerships linking sport with community support.**
- **Cost is only one access barrier. Transport, information, language, accessibility, equipment, scheduling and family responsibilities can determine whether an offer is genuinely usable.**
- **One-day events and festivals are useful entry points, but they need clear routes into recurring activity if they are to support sustained participation.**
- **Disability-focused examples show the added value of adaptation, peer support, trained staff and family guidance.**
- **Monitoring is a major weakness: participation, retention and equity data are often missing, limiting assessment of who is being reached and whether participation continues.**

**MOVE
PLAY
BELONG**

HOW THIS WILL BE USED - The findings will inform the Move, Play & Belong Framework, the practical Guidebook and Toolkit, and the design and evaluation of the project pilot. In particular, the report translates observed barriers and facilitators into practical design principles that can be tested and refined during implementation.

1. Introduction

Family-friendly sport offers are an important part of inclusive sport development because participation is shaped by household and community realities, not only by individual motivation. For many children, young people and adults—particularly families affected by disability, migration, low income, language barriers, foster-care circumstances or social isolation—participation depends on whether information is understandable, costs are manageable, transport is feasible, environments feel welcoming and organisations are trusted.

Families often provide transport, encouragement, interpretation, care support, decision-making and continuity. The existence of a club or activity is therefore not enough. An offer becomes practically accessible when it is visible, affordable, culturally welcoming, physically accessible, flexible and supported by people families trust. Move, Play & Belong: Inclusive Family Sports (MPB), Erasmus+ Sport project 101245086, responds to financial, cultural and structural barriers that can limit access to sport and physical activity for socially at-risk families.

This report identifies promising European practices and analyses the constraints and facilitators associated with family-friendly inclusive sport. The focus is on design and delivery features that can make programmes easier for families to access and more sustainable for organisations. Particular attention is given to disadvantaged, migrant and low-income families, who may experience several barriers simultaneously.

The findings are intended to provide a practical evidence base for the next stages of MPB. They will be translated into design principles for the MPB Framework, practical guidance for the Guidebook and Toolkit, and implementation criteria for the project pilot and its evaluation.

2. Conceptual Framework

The analysis brings together four complementary perspectives: family-centred participation, social inclusion, ecological barriers and facilitators, and inclusive sport design. Together, they help explain why family sport initiatives may succeed or fail beyond the technical quality of the sport activity itself. For this project, a socially at-risk family is understood as a family facing social, economic, health-related or environmental disadvantages that restrict regular access to physical activity and sport and may increase risks to physical, mental or social well-being.

Family-centred participation

Sport involvement is influenced by the household environment around physical activity. Parents and carers assess safety, suitability and affordability; siblings affect the practical organisation of family time; and wider family networks can provide transport, encouragement or childcare. Research has found associations between family socio-economic position, a sport-supportive family culture and children's participation in organised sport (Nielsen et al., 2012; Strandbu et al., 2020). Family-centred provision therefore treats family members as active participants and partners in access, rather than only as spectators or logistical support.

Social inclusion

Social inclusion concerns access, participation, dignity, belonging and meaningful interaction. Simply opening an activity to everyone does not ensure that groups facing exclusion can participate on equal terms. Research on refugee-background participation highlights the importance of cultural sensitivity, information, transport, family attitudes and routes into sustained participation (Block & Gibbs, 2017), while broader work on sport and inclusion underlines that participation is closely connected to people's wider social circumstances and

sense of belonging (Persson & Eriksen, 2025). Organisational approaches to inclusion also require deliberate attention to identity, difference and power relations (Wickman & Andersson, 2025).

Ecological barriers and facilitators

Participation barriers operate at several connected levels. Individual-level factors can include confidence, health status, previous experiences and perceived competence. Family and interpersonal factors include support, time, childcare and peer relationships. Organisational factors include fees, registration, schedules, staff skills and accessibility. Community-level factors include transport, local networks and the availability of suitable facilities, while policy and system factors influence funding, priorities and monitoring. For refugee- and migrant-background participants, documented barriers also include cost, discrimination, lack of culturally sensitive provision, limited knowledge of mainstream services, transport constraints, gender norms and family attitudes (Block & Gibbs, 2017).

Inclusive sport design

Inclusive sport design translates these perspectives into practical delivery choices: lowering the threshold for first participation, adapting activities and communication, accommodating different ages and abilities, and creating routes into continued involvement. Open days, drop-in play, family festivals and community sessions can reduce the emotional and administrative burden of trying an activity for the first time. Their long-term value is stronger when they connect participants to recurring sessions, clubs, family networks or other support.

Policy context

International and European frameworks reinforce the importance of inclusive, accessible physical activity. The WHO Guidelines on Physical Activity and Sedentary Behaviour emphasise the health value of physical activity across population groups, including people living with disability (WHO, 2020). The revised European Sports Charter places access, participation and inclusion among key principles for sport policy (Council of Europe, 2021), while UNESCO’s Kazan Action Plan links sport policy with sustainable development, inclusion and cross-sector cooperation (UNESCO, 2017). Erasmus+ likewise places inclusion and diversity among its horizontal priorities.

3. Methodology

The analysis used a descriptive and interpretive review process. The initial dataset contained 247 records with standardised fields covering EU Member States, including contributions from project partners. Records were progressively screened for relevance to family-friendly and inclusive sport and for sufficient information to support comparison.

Selection process

247	99	40	18
Initial records	Family-friendly / inclusive records	After duplicate and relevance screening	Final explicitly family-focused offers

The final screening retained activities when the title and description clearly identified a family sport focus and participation involved families, children together with family members, siblings, parents or guardians. Records were excluded when they were primarily policy or guidance documents, broad community inclusion initiatives, children- or youth-only provision, navigation support, therapy-only provision, or general events with only indirect family relevance. Initiatives also had to be located within the EU and fall within the ten-year period used for the mapping. One-day formats were not automatically excluded when they were explicitly family-focused and sufficiently described as a replicable sport offer.

Analysis

The retained records were reviewed for structure, completeness and variable meaning. Descriptive counts were used for country, activity type, organisation type, cost, duration, frequency, age group and the public availability of participant information. Each record was then reviewed qualitatively to identify recurring delivery patterns, inclusion features, likely strengths and likely constraints. The findings were synthesised into practical themes and implications for MPB.

Interpretation and limitations

The term “best practice” is used in this report in a practical rather than evaluative sense. The dataset does not contain outcome measures, participant surveys, demographic breakdowns, satisfaction data or longitudinal indicators that would allow the effectiveness of each initiative to be independently demonstrated. The report therefore identifies promising design and delivery features rather than ranking programmes by proven impact.

Many records contain “not stated” or “not publicly stated” fields for participant numbers, costs and start year. The initiatives also vary substantially in scale: some are national or year-round, while others are local or event-based. The dataset is a curated sample rather than a comprehensive inventory of all family-friendly sport opportunities in Europe. These limitations should be considered when interpreting country comparisons and are themselves relevant to the project’s recommendation for more consistent monitoring and public reporting.

4. Overview of Family-Friendly Sport Offers

The final sample covers nine countries: Germany, Finland, Cyprus, Ireland, Bulgaria, Italy, Poland, Portugal and Sweden. Representation is uneven: Germany accounts for five records and Finland for four, while the remaining countries contribute one or two examples. The geographical spread nevertheless provides a useful range of municipal, club-based, NGO, university-linked, parasport and partnership models.

Indicator	Value
Retained initiatives	18
Countries represented	9
Most represented country	Germany (5)

Indicator	Value
Second most represented	Finland (4)
Dominant activity category in the dataset	Multi-sport (11)

Patterns in delivery

Multi-sport formats are prominent in the dataset. This is relevant for family provision because a single session may need to accommodate different ages, abilities and preferences. Multi-sport models can combine games, movement, adapted activities, workshops, training and social support, allowing intensity, equipment and grouping to be adjusted more readily than in a narrowly competitive format.

Organisation types are diverse. Municipal sport services and public partnerships appear alongside non-profit clubs, sports clubs, NGOs, university-linked organisations, parasport structures, Special Olympics programmes and project consortia. The Irish Sports Partnerships illustrate local coordination between public bodies, clubs and families. Municipal examples such as Liikuntahulinat in Helsinki, Perheliikunta in Tampere and Active Family Days in Gdańsk show the value of visible, local and low-threshold entry points.

Cost structures vary from free participation and free/low-cost provision to fee-based or membership-linked activities, with cost information absent in several records. Affordability therefore needs to be considered beyond the registration fee, including transport, equipment, food, sibling participation and the time required from parents or carers.

The sample also includes disability-focused family support. Special Olympics Family Camp in Finland, Valttiplus, Special Olympics Portugal and the Swedish Special Olympics Family Programme combine physical activity with peer support, information, coaching, counselling, camps, inspiration meetings or introductions to clubs. These examples illustrate how family support can be built around sport rather than treated as a separate service.

Duration and frequency range from annual one-day events to weekly programmes, recurring sessions, year-round networks, seasonal training and multi-year projects. Event formats can be effective for outreach and first contact, while regular and recurring models offer stronger potential for habit formation, social connection and progression into sustained activity.

RECURRING DESIGN ELEMENTS Across the retained initiatives, five features appear repeatedly: affordability, active family participation, recurring opportunities, welcoming and adaptable delivery, and partnerships that connect sport with community support.

Overview by country

Country	Records	Illustrative examples	Main delivery pattern
Germany	5	Pfeffersport, Eintracht Frankfurt, Inklusive Alster, DOSB/pools, MTV Stuttgart	Club-based and public provision; mostly weekly

Country	Records	Illustrative examples	Main delivery pattern
Finland	4	Liikuntahulinat, Special Olympics Family Camp, Valttiplus, Perheliikunta	Municipal family activity, adapted camps and counselling
Cyprus	2	Family Sport Festivals; Inclusive Family Activity Days	Municipal and NGO activity days / festivals
Ireland	2	Cork and Waterford Sports Partnerships	Community programmes and recurring sessions
Bulgaria	1	Inclusive Family Sport Days	Municipality/NGO annual family sport day
Italy	1	Train4Family Palermo	Project-based adapted sport and education
Poland	1	Active Family Days	Municipal annual family activity
Portugal	1	Famílias / Family Support Network	Family-support network linked to events
Sweden	1	Special Olympics Family Programme	Family programme, camps and club introduction

Partner-country context

The MPB consortium comprises organisations from Latvia, Germany, Estonia, Italy, Greece and Spain. In the final 18-offer sample, Germany is represented by five initiatives and Italy by one. No initiative from Latvia, Estonia, Greece or Spain remained in the final sample. This should not be interpreted as evidence that those countries lack relevant practice: the final sample reflects the applied eligibility criteria and the limits of the curated dataset. The available report data do not provide an activity-by-activity exclusion log that would support a more specific explanation for each country.

Country	MPB partner	Retained offers	Interpretation
Latvia	Latvian Sports Federations Council	0	Coordinator country; no final retained offer
Germany	ICSSPE	5	Represented in final sample
Estonia	Estonian Sport for All Association	0	No final retained offer
Italy	European Culture and Sport Organization (ECOS)	1	Represented in final sample

Country	MPB partner	Retained offers	Interpretation
Greece	KMOP Education & Innovation Hub	0	No final retained offer
Spain	Unió de Federacions Esportives de Catalunya (UFEC)	0	No final retained offer

5. Constraints and Implications for MPB

1. Affordability

Although several offers are free or low-cost, others charge fees or do not publicly state the cost. For low-income families, even modest fees can become significant when combined with transport, clothing, equipment, food, sibling participation and time away from paid work. Residential camps may offer substantial value but can be inaccessible without subsidies.

IMPLICATION FOR MPB Keep the core entry point free or clearly low-cost where possible. Budget for hidden participation costs—especially equipment and transport—and communicate financial support clearly.

2. Continuity

Annual family sport days and one-day festivals create visibility and allow families to try sport in a low-pressure setting, but they do not automatically lead to regular participation. Without follow-up routes into weekly sessions or clubs, an event can remain a promotional experience rather than a sustained inclusion pathway.

IMPLICATION FOR MPB Build a defined “next step” into every pilot activity: referral to recurring sessions, club contacts, follow-up information and a simple way for families to stay connected.

3. Accessibility and adaptation

Families that include persons with disabilities may require more than a general statement that an activity is inclusive. Practical access can depend on trained coaches, adapted rules and equipment, accessible facilities, sensory considerations, safeguarding, assistance, transport and flexibility. Several disability-focused examples show these features, while many general offers do not state how adaptation is handled.

IMPLICATION FOR MPB Use an accessibility checklist for venue, communication and activities; brief staff in advance; provide adaptations and assistance options; and ask families what support they need rather than assuming one standard solution.

4. Information and language

Families may not participate if they do not know an offer exists, cannot understand registration information or do not see themselves represented in communication. This is particularly relevant for migrant and newly arrived families. In the mapped records, costs, start dates and participant information are also often incomplete.

IMPLICATION FOR MPB Use plain-language and visual communication, make key information available in relevant languages where feasible, keep registration simple, and work through trusted community channels rather than relying only on general public promotion.

5. Monitoring

Only a minority of records provide clear participation or reach figures, and the dataset does not contain consistent information on retention, demographic reach, satisfaction or progression. Without proportionate monitoring, organisations cannot assess whether they are reaching the families most at risk of exclusion or improving access over time.

IMPLICATION FOR MPB Define a small minimum indicator set for the pilot: households and participants reached, attendance/repeat participation, support or adaptations used, satisfaction, and intended/actual continuation. Collect only data that are necessary and handle them proportionately.

6. Infrastructure and logistics

Some sports depend heavily on facilities, equipment, trained staff or environmental conditions. Swimming and sailing illustrate how an inclusive activity can still be difficult to access when transport, timing, equipment or venue availability create barriers.

IMPLICATION FOR MPB Assess the full participation journey—from home to venue and back. Prioritise accessible locations, realistic scheduling, equipment provision and contingency planning for weather or facility constraints.

6. Facilitators and Design Principles

1. Local trust

Municipalities, schools, community clubs, NGOs, sports partnerships and family networks often have established relationships with residents. Familiar institutions can reduce uncertainty for families that are new to sport or new to the country. Helsinki and Tampere illustrate municipal low-threshold provision, while Cork and Waterford show the coordinating role of local sports partnerships.

MPB DESIGN PRINCIPLE Deliver through trusted local partners and make staff visible, consistent and approachable. Community outreach should be part of delivery, not an afterthought.

2. Whole-family participation

When parents, carers, siblings and other relatives can take part, families do not have to choose between one participant's activity and other care responsibilities. This is particularly relevant for single-parent households, larger families and families of children with disabilities. Special Olympics family initiatives in Finland, Portugal and Sweden show how sport can be combined with family support and shared participation.

MPB DESIGN PRINCIPLE Design activities around the household rather than a single “target participant”. Allow different generations and abilities to participate together or in parallel.

3. Multi-sport flexibility

The strong presence of multi-sport provision suggests that variety is useful in inclusive family settings. Games, play, swimming, athletics, adapted activities and workshops can be combined so that rules, intensity, equipment and grouping are adjusted to participants' needs.

MPB DESIGN PRINCIPLE Use flexible activity stations and multiple ways to participate. Success should not depend on prior sport experience or one fixed level of physical ability.

4. Partnership

Valtplus, the Irish Sports Partnerships, Special Olympics family programmes and municipal-club collaborations illustrate the value of combining expertise. Partnerships can connect funding, facilities, coaching, disability knowledge, volunteers, outreach and evaluation.

MPB DESIGN PRINCIPLE Define partner roles around the family journey: outreach, registration, delivery, accessibility support, referral and follow-up. Avoid concentrating all inclusion responsibilities in a single organisation.

5. Low-cost and supported access

Free and free/low-cost initiatives feature prominently in the sample. The most equitable model, however, addresses the broader cost of participation through equipment lending, transport support, sibling access, family pricing and transparent information about financial support.

MPB DESIGN PRINCIPLE Treat affordability as a package, not only a registration fee. Identify likely hidden costs before the pilot and decide which can be removed or subsidised.

6. Peer support

Family camps, networks and digital inspiration meetings can reduce isolation and allow parents and carers to learn from one another. In disability-focused provision, this social layer may be as important as the activity itself because it strengthens confidence, knowledge and belonging.

MPB DESIGN PRINCIPLE Create informal space for families to meet and exchange experience. Where relevant, use family ambassadors or peer supporters to strengthen trust and continuity.

Practical design checklist for the MPB pilot

- **Low-threshold entry:** simple registration, clear information and little or no prior sport knowledge required.
- **Whole-family participation:** options for parents/carers, children and siblings, including different ability levels.
- **Affordability:** transparent costs and practical support for equipment, transport or other barriers where possible.
- **Accessibility:** venue, activity, communication and sensory needs considered before delivery.
- **Trusted outreach:** recruitment through local organisations and community networks that families already know.
- **Progression:** a clear route from the pilot into recurring local activity or continued family participation.
- **Proportionate monitoring:** a small, consistent indicator set that can inform refinement of the Framework and Toolkit.

7. Conclusion

The retained initiatives provide a useful snapshot of family-friendly inclusive sport provision across Europe. They range from municipal family festivals and low-cost activity sessions to club-based weekly sport, adapted camps, counselling projects, family-support networks and Special Olympics-linked programmes. The strongest models combine physical activity with family support, community partnership and a route into continued participation.

The analysis indicates that inclusive family sport is most credible when it responds to the household realities behind participation. Families need affordable access, usable venues, trusted information, welcoming staff, flexible activities, sibling inclusion, appropriate adaptation and clear next steps. These requirements are particularly important for families facing overlapping financial, linguistic, cultural, disability-related or logistical barriers.

The mapping also exposes an evidence gap. Participant reach, cost information, retention and equity indicators are inconsistently reported. Better monitoring does not require complex bureaucracy, but it does require a small set of consistent measures and a commitment to use the findings for improvement.

Overall, family-friendly inclusive sport should be understood as a participation system rather than a single activity. The findings from this report will be carried forward into the MPB Framework, Guidebook and Toolkit and will shape the practical design, monitoring and refinement of the project pilot implementation.

CORE MESSAGE Inclusive family sport works best when the family journey is designed end to end: outreach → access → welcoming participation → adaptation and support → follow-up → continued activity.

9. Appendix

A. Variables / dataset fields

Country	City	Sport
Name of organisation	Type of organisation	Costs
Stakeholders	Number of participants	Age groups
Name / project or activity	Type of activity/ies	Duration
Frequency	Comments	Year begun

B. List of retained practices

01 Train4Family Palermo

Inclusive sport and family wellbeing activities for children with disabilities and their families, connected to the Erasmus+ Train4Family project. It aims to promote inclusive sport participation and family wellbeing for children with disabilities by equipping families, coaches, and organisations with practical adapted-sport approaches.

Host organisation: CUS Palermo / Train4Family

Place: Palermo, Italy

Partners: University sport organisation / CUS Palermo, University of Murcia, NGOs, children with disabilities, families, coaches.

Cost for participants: Not publicly stated for families

Number of participants reached: Not publicly stated

Types of activities: Athletics, swimming, adapted sport activities, sport demonstrations, family wellbeing education

Duration: Multi-year / ongoing project

Frequency: Project-based

Link: <https://train4family-project.eu/>

02 Inclusive Family Sport Days

A free, annual family sport day in Stara Zagora delivered by the municipality together with local NGOs. The initiative uses open multi-sport activities to provide a low-threshold community entry point for children, young people and families.

Host organisation: Stara Zagora municipality and NGOs

Place: Stara Zagora, Bulgaria

Partners: Municipality, NGOs, families

Cost for participants: Free

Number of participants reached: Not stated

Types of activities: Open activities

Duration: 1 day

Frequency: Annual

Link: <https://starazagora.bg>

03 Family Sport Festivals

A municipal family sport festival in Larnaca offering open multi-sport activities for children, young people and families. The model is relevant for local outreach and low-threshold introduction to sport.

Host organisation: Municipality of Larnaca

Place: Larnaca, Cyprus

Partners: City, clubs, families

Cost for participants: Not stated

Number of participants reached: Not stated

Types of activities: Open activities

Duration: 1 day

Frequency: Annual

Link: <https://larnaka.org.cy>

04 Inclusive Family Activity Days

Recurring workshops and sport events in Limassol delivered by Active Cyprus and local NGOs, connecting families with community partners through low-cost or free multi-sport activity.

Host organisation: Active Cyprus / local NGOs

Place: Limassol, Cyprus

Partners: NGOs, municipalities, families

Cost for participants: Low-cost/free

Number of participants reached: Not stated

Types of activities: Workshops & sport events

Duration: 1 day

Frequency: Recurring

Link: <https://activecyprus.org>

05 Liikuntahulinat / Family Activity Courses

Drop-in family activity sessions and sport courses in Helsinki for children under nine and their families. The municipal format is a strong example of low-threshold, family-oriented provision that is not limited to a single sport or disability group.

Host organisation: City of Helsinki Sports Services

Place: Helsinki, Finland

Partners: City of Helsinki; families with young children; sports halls; instructors

Cost for participants: Adults EUR 3.50, others EUR 2, children under 9 free (as listed for Liikuntahulinat)

Number of participants reached: Not publicly stated

Types of activities: Drop-in family activity sessions and family sport courses

Duration: recurring sessions during term sessions

Frequency: Recurring

Link: <https://liikunta.hel.fi/fi/pages/ohjattu-liikunta/lasten-nuorten-ja-perheiden-liikuntakurssit>

06 Special Olympics Family Camp

Special Olympics Family Camp is a family camp; peer support; sports sessions; information sessions offer in Nastola (Lahti), delivered by Special Olympics Finland / Finnish Paralympic Committee. It focuses on multi-sport / adapted family physical activity for children aged 8-13 plus family members and siblings. It is particularly relevant because very strong family inclusion focus. It aims to strengthen family support, peer connection and inclusive sport participation by bringing families into accessible sport activities.

Host organisation: Special Olympics Finland / Finnish Paralympic Committee

Place: Nastola, Finland

Partners: Finnish Paralympic Committee; Special Olympics Finland; Pajulahti Sports Institute; athlete leaders; coaches; families; siblings; assistants

Cost for participants: Fee-based, EUR 150 per person; EUR 2 for siblings aged 0-5; same price for guardians/assistants/older siblings

Number of participants reached: Not stated

Types of activities: Family camp; peer support; sports sessions; information sessions

Duration: 3 days

Frequency: Recurring camp / annual-style offering

Link: <https://www.paraurheilu.fi/fi/222/tapahtumat/813/>

07 Valttiplus

A 2024–2027 family physical activity counselling and development project with pilots in Jyväskylä and Helsinki. It combines family guidance, staff training and local implementation to help children and young people with disabilities and their families identify suitable activities and connect with sport opportunities.

Host organisation: Finnish Paralympic Committee, JAMK Likes, and Kolmen kampuksen urheiluopisto

Place: Nationwide, Finland

Partners: Finnish Paralympic Committee; JAMK Likes; Kolmen kampuksen urheiluopisto; families; children and youth with disabilities; municipal sports counselling professionals; student mentors

Cost for participants: Partly funded; participant cost not publicly stated

Number of participants reached: About 16 regional clusters involved but participant count not publicly stated

Types of activities: Project; family counselling development; staff training; pilot implementation

Duration: 2024-2027

Frequency: Ongoing project

Link: <https://www.paralympia.fi/fi/26/valttiplus>

08 Perheliikunta

Recurring family physical activity sessions and events delivered by the City of Tampere together with sports clubs, other city sectors and family actors. The model provides a broad, low-threshold municipal entry point for families with children.

Host organisation: City of Tampere

Place: Tampere, Finland

Partners: City of Tampere; sports clubs; city sectors; family actors; families with children

Cost for participants: Free

Number of participants reached: Not stated

Types of activities: Family physical activity sessions and events

Duration: Ongoing

Frequency: Recurring

Link: <https://www.tampere.fi/liikunta/liikuntaa-lapsille-ja-lapsiperheille/perheliikunta>

09 Inclusive Family Activity Programme

A recurring programme of workshops and activities delivered by Cork Sports Partnership with local authorities, clubs and families. It illustrates how community partners can broaden access to inclusive family sport.

Host organisation: Cork Sports Partnership

Place: Cork, Ireland

Partners: Local authority, clubs, families

Cost for participants: Free/low

Number of participants reached: Not stated

Types of activities: Workshops & activities

Duration: Ongoing

Frequency: Weekly

Link: <https://www.corksports.ie>

10 Family Inclusive Activities

A regular series of family events and sessions delivered by Waterford Sports Partnership with local authorities, clubs and families, designed to broaden access to inclusive physical activity.

Host organisation: Waterford Sports Partnership

Place: Waterford, Ireland

Partners: Local authority, families, clubs

Cost for participants: Free/low

Number of participants reached: Not stated

Types of activities: Events & sessions

Duration: Ongoing

Frequency: Regular

Link: <https://www.waterfordsportspartnership.ie>

11 Active Family Days

An annual one-day open sport event delivered by the municipality of Gdańsk. The multi-sport format provides a visible and low-threshold opportunity for families and participants of different ages.

Host organisation: Gdański Ośrodek Sportu

Place: Gdansk, Poland

Partners: City, clubs, families

Cost for participants: Free/low

Number of participants reached: Not stated

Types of activities: Open Sport events

Duration: 1 day

Frequency: Annual

Link: <https://sportgdansk.pl>

12 Famílias / Family Support Network

A year-round Special Olympics Portugal family support programme linked to competitions and events. It combines family engagement, sport participation, volunteers and coaches, with family support as an explicit programme component.

Host organisation: Special Olympics Portugal

Place: Lisbon, Portugal

Partners: Athletes; families; volunteers; coaches; community

Cost for participants: Not publicly stated

Number of participants reached: 3708 registered athletes and Unified partners (2019 census)

Types of activities: Family support programme linked to competitions and events

Duration: Year-round

Frequency: Ongoing

Link: <https://specialolympicsportugal.pt/familias/>

13 Special Olympics Family Programme

A year-round Swedish Special Olympics family programme combining family days and camps, digital inspiration meetings, shared training and introductions to local clubs for children and young people with intellectual disabilities and their relatives.

Host organisation: Parasport Sverige/Special Olympics Sverige

Place: Stockholm, Sweden

Partners: Stiftelse Frimurare Barnhuset i Stockholm; families; local sports clubs; parents and relatives

Cost for participants: Not publicly stated

Number of participants reached: Not publicly stated

Types of activities: Family days, family camps, digital inspiration meetings, training together, club introduction

Duration: Year-round

Frequency: Ongoing

Link: <https://parasport.se/special-olympics/special-olympics/vart-erbjudande/famili>

14 Integration & family sports

A weekly community sport offer in Berlin delivered by Pfeffersport e.V., a non-profit sports club. It provides regular, club-based multi-sport opportunities for families and migrant participants within an inclusive community pathway.

Host organisation: Pfeffersport e.V.

Place: Berlin, Germany

Partners: Families, migrants

Cost for participants: Low/varies

Number of participants reached: Hundreds

Types of activities: Classes, community sport

Duration: Ongoing

Frequency: Weekly

Link: <https://pfeffersport.de>

15 Youth & family sport

Family-oriented sport activities offered by Eintracht Frankfurt to its members. The recurring club-based model shows how established sports organisations can provide family participation opportunities within regular provision.

Host organisation: Eintracht Frankfurt

Place: Frankfurt, Germany

Partners: Members

Cost for participants: Medium

Number of participants reached: Thousands

Types of activities: Training

Duration: Ongoing

Frequency: Weekly

Link: <https://eintracht.de>

16 Segeltraining/sailing

Seasonal weekly sailing training and events in Hamburg delivered through Inklusive Alster. The initiative combines club delivery and sponsor support to provide inclusive sailing opportunities for children and families.

Host organisation: Inklusive Alster

Place: Hamburg, Germany

Partners: Club members and sponsors

Cost for participants: Partly funded

Number of participants reached: Over 100

Types of activities: Training & events
